Plug N Drive™ Integrated Power
Module for Appliance Motor Drive

Description

International Rectifier's IRAMX16UP60A is an Integrated Power Module developed and optimized for electronic motor control in appliance applications such as washing machines and variable speed compressor drives for in-room air-conditioning systems and commercial refrigerators. Plug N Drive technology offers an extremely compact, high performance AC motor-driver in a single isolated package for a very simple design.

An open emitter configuration of the low side IGBT switches offer easy current feedback and overcurrent monitor for high precision and reliable control.

A built-in temperature monitor and over-current protection, along with the short-circuit rated IGBTs and integrated under-voltage lockout function, deliver high level of protection and fail-safe operation.

The integration of the bootstrap diodes for the high-side driver section, and the single polarity power supply required to drive the internal circuitry, simplify the utilization of the module and deliver further cost reduction advantages.

Features

- Integrated Gate Drivers and Bootstrap Diodes.
- Temperature Monitor
- Temperature and Overcurrent shutdown
- Fully Isolated Package.
- Low VCE (on) Non Punch Through IGBT Technology.
- Undervoltage lockout for all channels
- Matched propagation delay for all channels
- Low side IGBT emitter pins for current control
- Schmitt-triggered input logic
- Cross-conduction prevention logic
- Lower di/dt gate driver for better noise immunity
- Motor Power range 0.75~2kW / 85~253 Vac
- Isolation 2000V_{RMS} min

Typical Application Connection I RAMX16UP60A

1. Electrolytic bus capacitors should be mounted as close to the module bus terminals as possible to reduce ringing and EMI problems. Additional high frequency ceramic capacitor mounted close to the module pins will further improve performance.
2. In order to provide good decoupling between Vcc-Gnd and Vb-Vs terminals, the capacitors shown connected between these terminals should be located very close to the module pins. Additional high frequency capacitors, typically 0.1mF, are strongly recommended.
3. Low inductance shunt resistors should be used for phase leg current sensing. Similarly, the length of the traces between pins 12, 13 and 14 to the corresponding shunt resistors should be kept as small as possible.
4. Value of the boot-strap capacitors depends upon the switching frequency. Their selection should be made based on IR design tip DN 98-2a, application note AN-1044, or figure 10.
5. Over-current sense signal can be obtained from external hardware detecting excessive instantaneous current in inverter.

The drawing shows the top and side views of the IRAMX16UP60A component. The top view includes dimensions: 62 (total width), 56 (width to mounting hole), 3 (hole offset), 25.3 (height), 11.4 (height to mounting hole), 23 (pin pitch), 0.80 (pin width), and 0.55 (pin thickness). It also shows a 22 PITCHES = 44 dimension for the pin array. The side view shows a 5.5 mm height and a 46.2 mm length. Callouts include note 1, note 2, note 3, and feature callouts A, B, and C. The component is labeled 035-Z2L03 and IRAMX16UP60A.
